João Igôr Rodrigues Nunes

JAVA BACK-END DEVELOPER

01. PROFESSIONAL SUMMARY

Back-end Developer seeking opportunities as a Junior Java Developer. Solid foundation in the Java ecosystem (Spring Boot, Spring Data JPA, Maven) and applying software engineering best practices including SOLID principles and layered architecture. Academic and hands-on experience building RESTful APIs, integrating relational and NoSQL databases (PostgreSQL, MySQL, MongoDB), and containerizing environments with Docker. Currently pursuing a Bachelor's in Software Engineering, combining advanced academic background with real commercial software development and client-facing experience since 2019.

02. TECHNICAL SKILLS

- **Java Ecosystem:** Java, Spring Boot, Spring Data JPA, RESTful APIs, DTOs, Global Exception Handling, Maven.
- **Databases:** PostgreSQL, MySQL, MongoDB (NoSQL), Data Modeling and Entity-Relationship (ER) Design.
- **Infrastructure & DevOps:** Docker, Docker Compose, Linux (Ubuntu), Git, GitHub, GitLab.
- **Architecture & Best Practices:** Clean Code, SOLID Principles, Repository Pattern, Agile Methodologies (Scrum).
- **Other Technologies:** Python, PHP, C#, HTML5, CSS3, JavaScript, React.

03. FEATURED PROJECTS (JAVA & BACK-END FOCUS)

● Banking API (mod_account)

Spring Boot · JPA · Pessimistic Locking · DTOs

Co-development of a RESTful banking account management API using Spring Boot. Implementation of domain entities, controllers, DTOs, pessimistic locking for concurrency control, and global exception handling.

● Internal Management API

Java · Spring Boot · PostgreSQL · Docker

Development of a RESTful API in Java and Spring Boot applying the Repository pattern and rich domain modeling for business rules. PostgreSQL integration and Docker container orchestration.

● ModuTask CLI

Java · MongoDB Atlas · AES Encryption · Layers

Command-line task management system developed in Java. Layered architecture implementation, MongoDB Atlas integration for cloud persistence, and data security with AES encryption.

● Logic & Data Structures Applications

Java OOP · SOLID · Streams API · Priority Queues

Development of Java applications focused on object-oriented logic ("March of the Legion" and Banking Simulator), applying SOLID principles, Streams API, and efficient priority queue management.

● Notify-Events

Spring Boot · REST API · Vercel Deploy

Architecture and deployment of a web application for event management, developed with Spring Boot and published on the Vercel platform.

04. PROFESSIONAL EXPERIENCE

Web Developer — Nolei Creative

2019 — Present

- **Full Software Lifecycle:** Developed and maintained 15+ web applications and e-commerce platforms (B2B & B2C), handling relational data modeling (MySQL) through production deployment on Linux servers.
- **Full-Stack & APIs:** Built responsive interfaces with HTML5, CSS3, JavaScript, and Bootstrap. Implemented custom business logic and integrated RESTful APIs using PHP.
- **High-Availability CMS & Platforms:** Advanced customization and architecture with WordPress, WooCommerce, OpenCart, and Joomla for healthcare (LAMIC Laboratory, CET Orthopedics, Nuclear Medicine) and agribusiness (A Casa do Agricultor).
- **Integration & Automation:** Configured payment gateways, built automation webhooks (e.g., WhatsApp appointment booking), optimized Core Web Vitals, and administered hosting environments.
- **Technical Alignment:** Direct requirement elicitation with stakeholders, ensuring high-value delivery, legacy systems stability, and sound architectural decisions.

05. EDUCATION

Bachelor of Science in Software Engineering

2025 — 2029

Jala University

Associate Degree in Artificial Intelligence

Planned

FIAP

IT Technician (Integrated High School)

2014 — 2019

IF Campus Salgueiro

06. LANGUAGES

- **Portuguese:** Native.
- **English:** Intermediate (technical reading, grammar & presentations).
- **Spanish:** Basic.
